

Yealink EHS 36 + Sennheiser

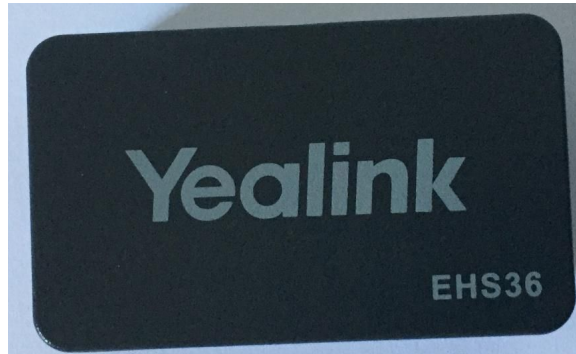

Packaging Contents

The EHS 36 is designed to work with Jabra, Plantronics and Sennheiser headsets. **So not all cables that come in the box are required.** Please pay close attention to the next couple of pages to ensure you are using the right cables for your chosen headset. This manual is only for the model headset you have purchased so will not talk about all the cables.

For a **Sennheiser** Headset you will need:

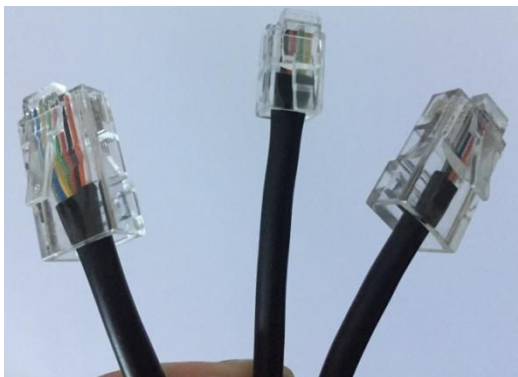

1) EHS 36 box –

2) The RJ 12 cable – This cable is about 23cm long and the black cable is round. NOT flat.

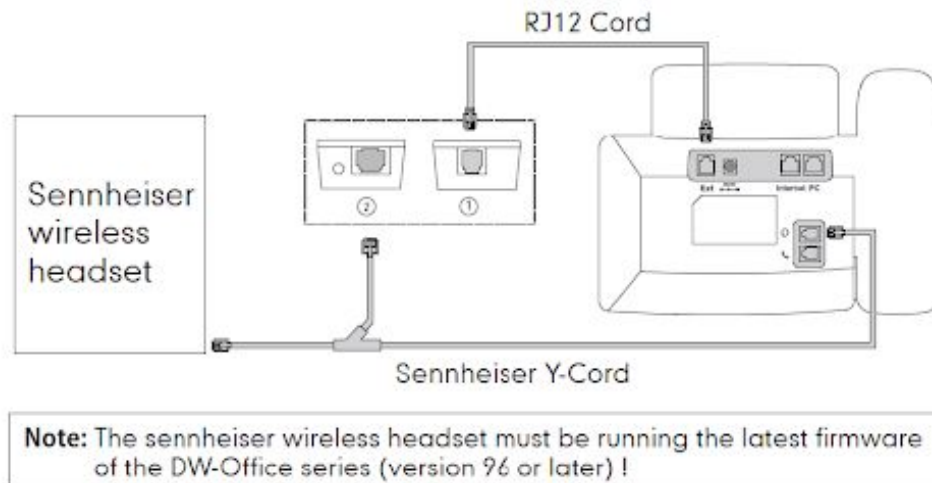

3) The Sennheiser Y cord – as the name suggests this looks like a y with 2 cables out one end and 1 out the other.

To Set your Sennheiser headset and EHS 36 up:

The following figure shows the connection between the IP phone and the Sennheiser wireless headset.

The EHS Box has 2 sides to it.

Side 1

Side 2

The RJ 12 cable plugs into side 1 of the ehs box. And the other end of this cable plugs into the EXT port on the back of your phone handset.

When you are looking at the Sennheiser Y cable take the single end and plug this into the **Green** phone port on the back of your sennheiser base.

The other end of this Y cable splits into 2, one of the connections will be larger than the other. The larger end plugs into side 2 of the EHS box.

The final side of Y cable plugs into the headset jack on your phones handset.

The last thing you will need to check is on the base of your sennheiser headset. There are 6 little white switches on the base, Number 1 will need to be in the down position everything else up.

And the ABC slider on the headset base set to A

DW Series base

D10 base
